

# JUMP RING HELPER

Little Glass Helpers

## TUTORIAL

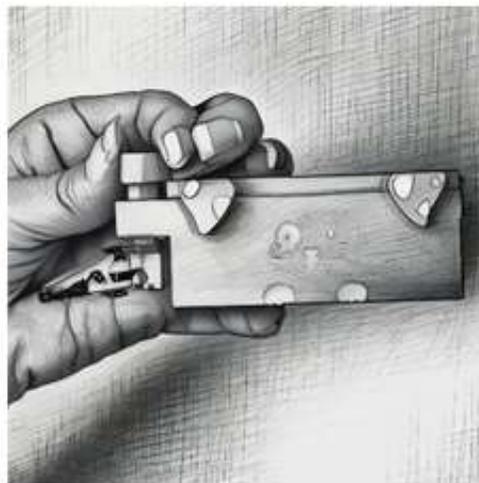

Step 1: To make jump rings, insert wire into the hole of one of the cylinder helpers.

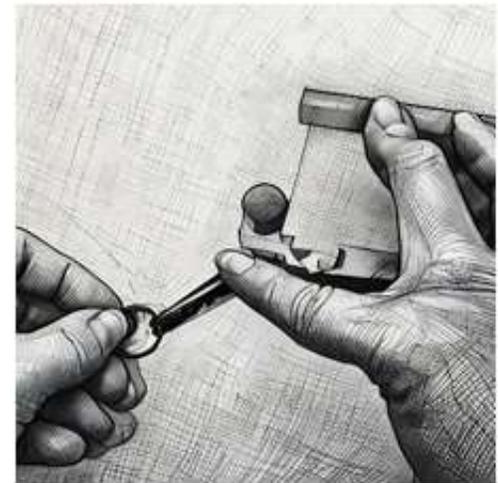

Step 2: Wind the wire around the helper.

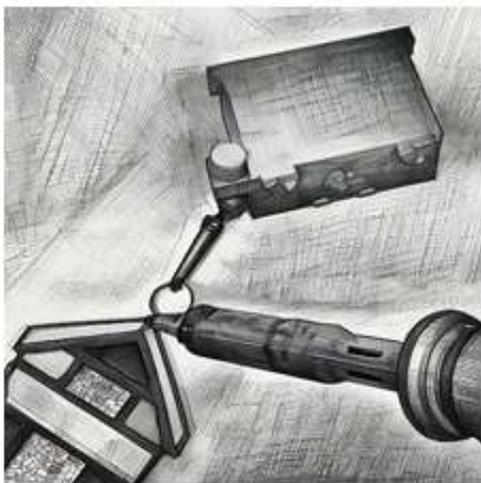

Step 3: Clip along the wire by inserting your snips into the guiding inset.

Step 4: To solder the jump ring to your pieces, pull the clip up and turn it to your desired setting.

Step 5: Press down on the clip to open it and put the ring in with the opening facing out.

Step 6: Solder the ring to your piece. Your ring will be stronger if you solder it to a joint on your piece.

Step 7: Release the ring by pushing down on the clip.

Step 8: Store your rings and guides in the box and your guard dog will take good care of them until next time.
